About **KWW**

It all began with a dream to make convenience a reality for the Indian consumer. With passion, diligence and commitment, we have created a wide range of products to make life better. We started with the manufacturing of Copper Wires, moving on to LED Lightings, gradually touching every aspect of home utilities. KWW Electricals is proud to introduce a wide range of Electric fans with proper research in design and material, KWW range of products come with an aesthetic of clean lines and correct proportions. We use precision metal-work by artisans with vast experience in the industry. We believe in sustainability, based on the simple saying that if something is well made and beautiful, it will have a long and useful life.

KWW Fans endeavour to build, nurture and deliver faith. “Apno Ko De Hawa ka Bharosa” is not just a statement for us. It is the promise of freshness that invigorates our patrons and rejuvenates their body, mind and soul.

Optimer

CEILING FAN

Features

- ▶ 2 Years Warranty.
- ▶ Energy Saving Fan with energy efficient motor in 100% copper winding.
- ▶ Saving in electricity bill to the tune of Rs 1000/- per year compared to ordinary fan of non star rating category for 1200mm sweep*.
- ▶ ABS Blade of aerodynamic & slim design for whisper silent operation with excellent air thrust and high air delivery.
- ▶ Double Ball Bearing.
- ▶ Innovative & contemporary design.
- ▶ Amazingly stylish with decorative ring.
- ▶ Superior polyurethane paint finish.
- ▶ Compliant to BEE 1 star rating.

Specifications

Sweep (in MM)	Power input (WATT)	Speed (in RPM)	Air Delivery (CMM)
1200	46	310	210

*based on electricity tariff of Rs 7/- per unit

Installation Guide

Ceiling Fan Selection

How to select your fan

Sweep Size

Sweep Size is referred to the entire diameter of a fan.

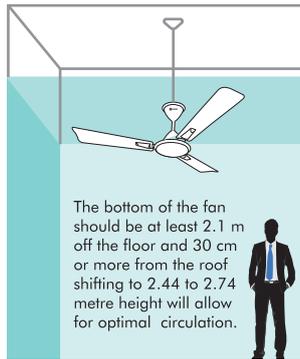

Speed (RPM)	Air Delivery (CMM)
315	210

Higher RPM does not mean higher air flow. Air flow/Air delivery is the major point of comparison in selecting a ceiling fan.

Sweep Size	Room
600 mm (24")	1.5 × 2.15 m
900 mm (36")	2.5 × 2.4 m to 2.0 × 3.0 m
1200 mm (48")	3.0 × 4.0 m to 3.65 × 3.65 m
1400 mm (56")	4.0 × 4.95 m to 4.55 × 4.55 m

Optimal Height

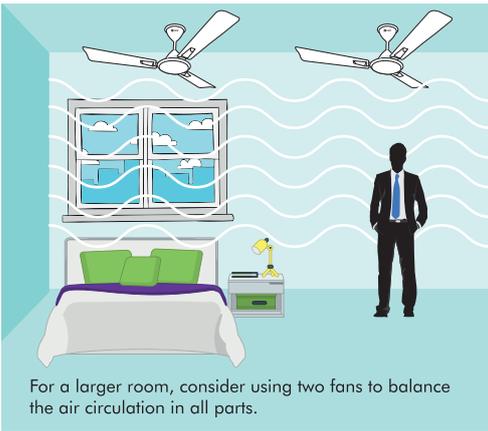

For ceilings that are taller than nine feet, add 6" to downrod for every foot of height.

The bottom of the fan should be at least 2.1 m off the floor and 30 cm or more from the roof shifting to 2.44 to 2.74 metre height will allow for optimal circulation.

The more space between the ceiling and the blades, the better for air flow and circulation.

- 10 ft
- 9 ft
- 8 ft } Optimal height
- 7 ft
- 6 ft
- 5 ft
- 4 ft
- 3 ft
- 2 ft
- 1 ft
- 0 ft

For a larger room, consider using two fans to balance the air circulation in all parts.

Sweep	1400 mm	1200 mm	900 mm
Centre Distance of Fan	3 m	2.5 m	1.8 m

The following calculation would serve to illustrate the selection of an exhaust fan:-

Situation Size	Volume	Air Changes/hr.	Air Movement
Office	10m×10m×4m = 400m ³	10	400×10:4000 m ³ /h
Factory	30m×20m×8m = 4800m ³	20	480×20:9600 m ³ /h
Restaurant	20m×10m×8m = 1600m ³	15	1600×15:24000 m ³ /h

Once the Air movement delivery required is determined the air movement should be divided by the rated air delivery for a particular model/size of fan. This would determine the sweep/model/No. of fans to be used for the required location.

LOCATION OF EXHAUST FAN

Sufficient open space should be available on inlet and outlet side of the fan Exhaust fan should never be mounted near windows or doors.

Avoid mounting directly over heat source.

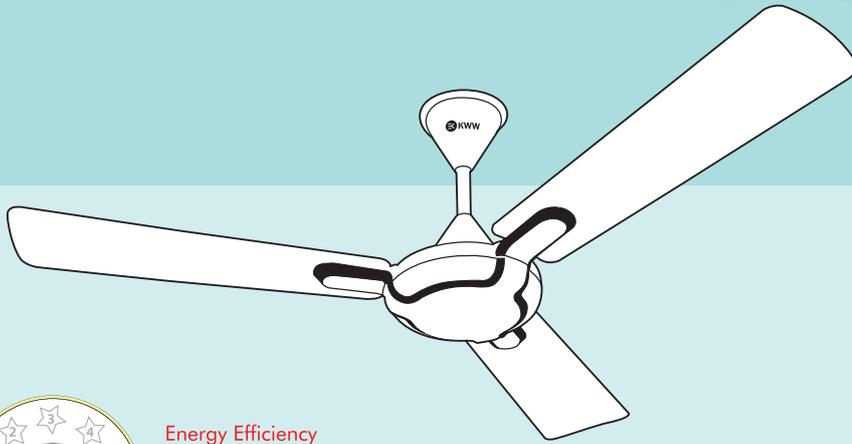

Some layouts of good and poor systems are

Poor Layout

Good Layout

Energy Efficiency

Lower electricity consumption means higher savings. More the number of star, more will be the power savings.
